Section 1: Hands-On Demonstration

Part 1: Identify Forensic Evidence in an iOS Data Case

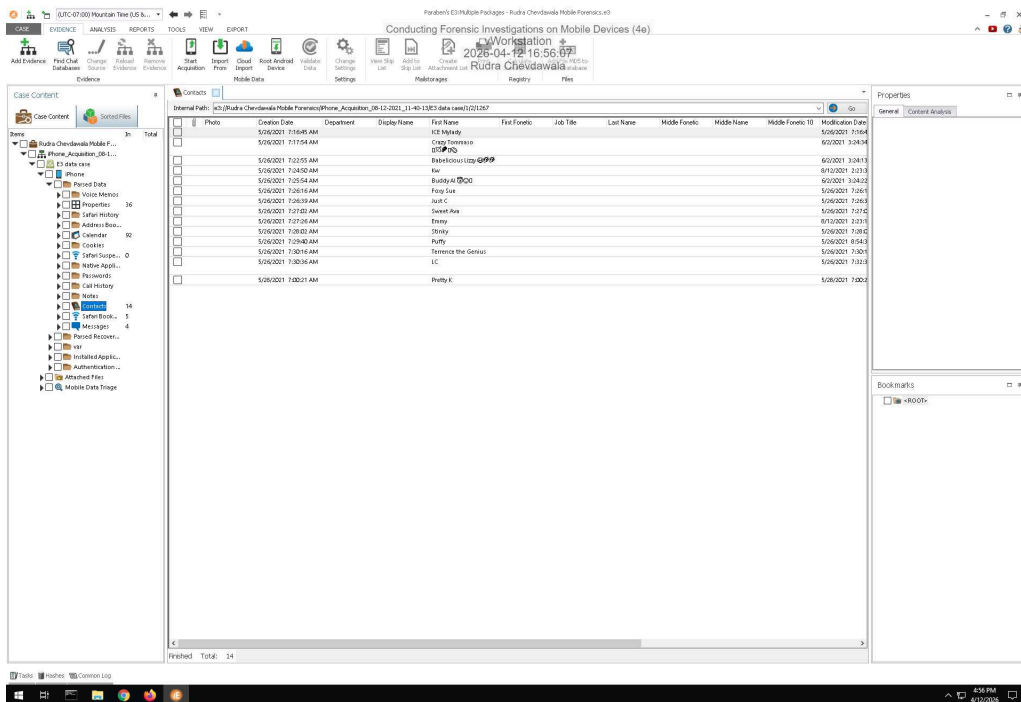

- 8. Make a screen capture showing the contents of the Properties pane.

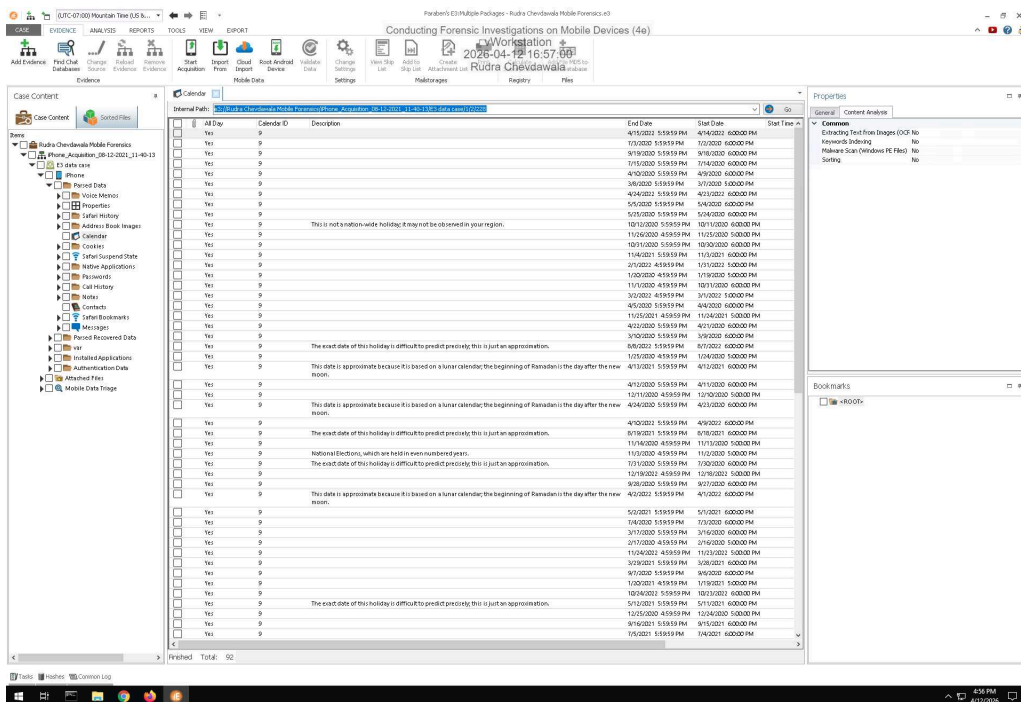

Conducting Forensic Investigations on Mobile Devices (4e)

Digital Forensics, Investigation, and Response, Fourth Edition - Lab 08

11. Make a screen capture showing the contents of the Contacts grid.

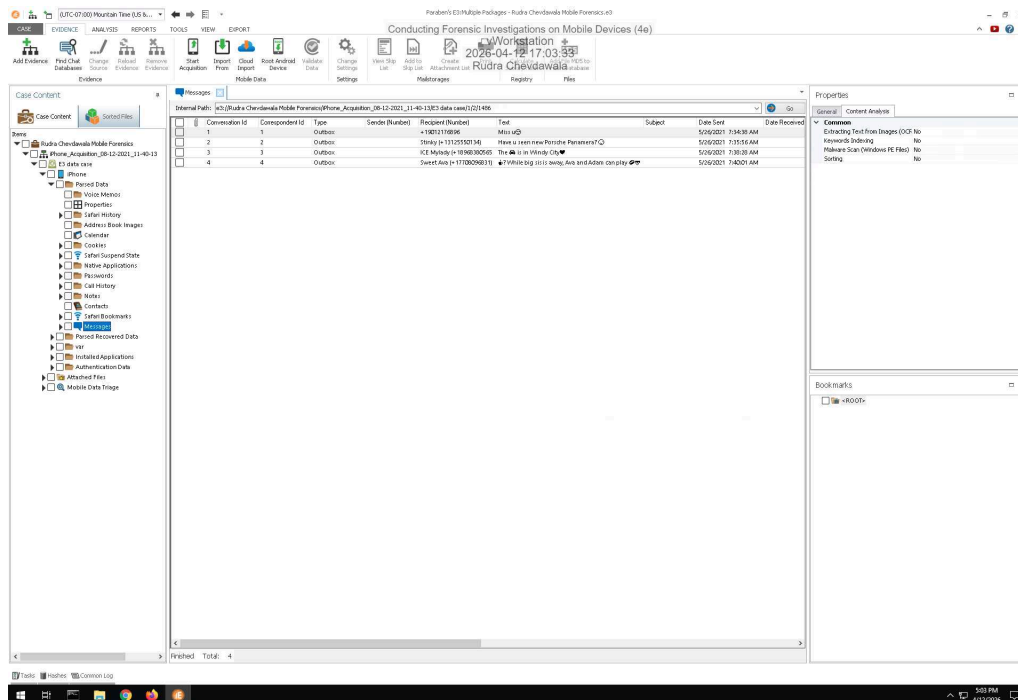

14. Make a screen capture showing the contents of the Calendar grid.

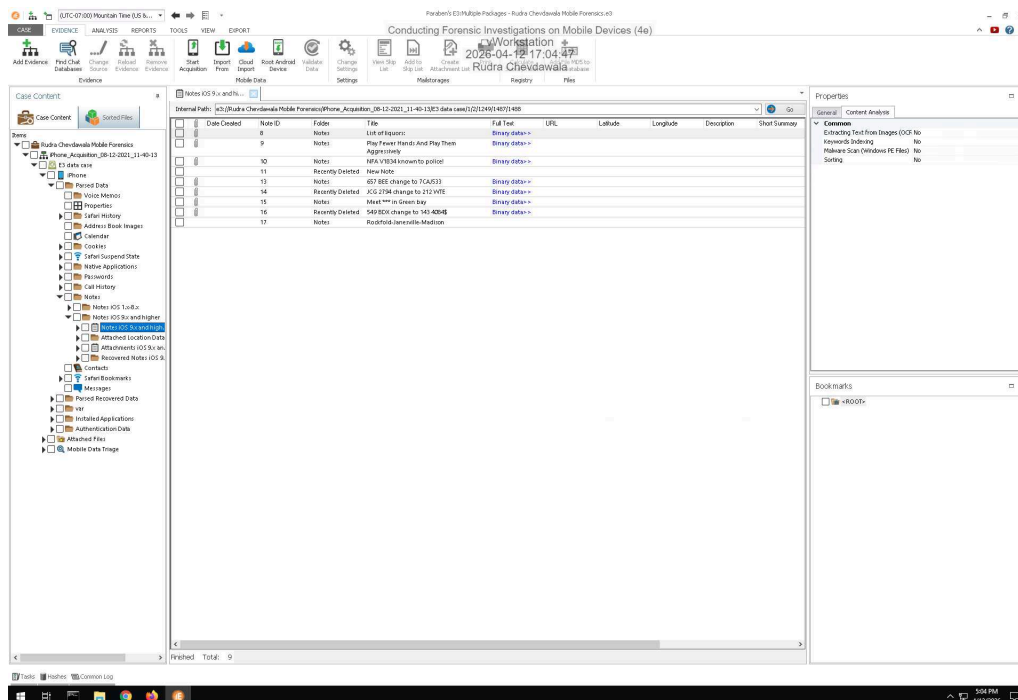

Conducting Forensic Investigations on Mobile Devices (4e)

Digital Forensics, Investigation, and Response, Fourth Edition - Lab 08

20. Make a screen capture showing the contents of the Messages grid.

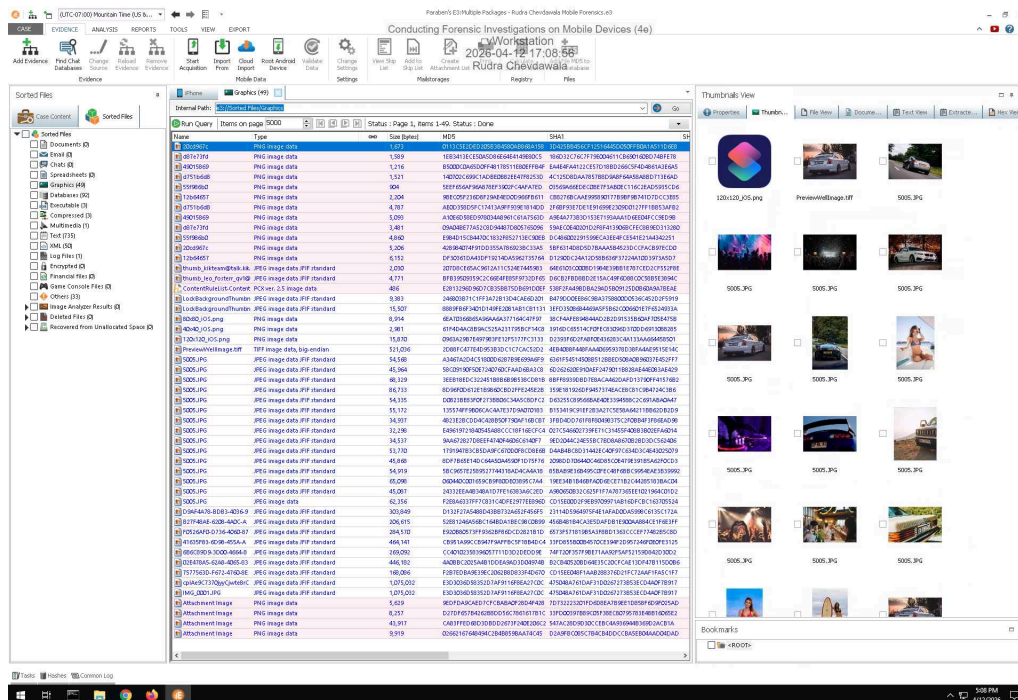

24. Make a screen capture showing the contents of the Notes grid.

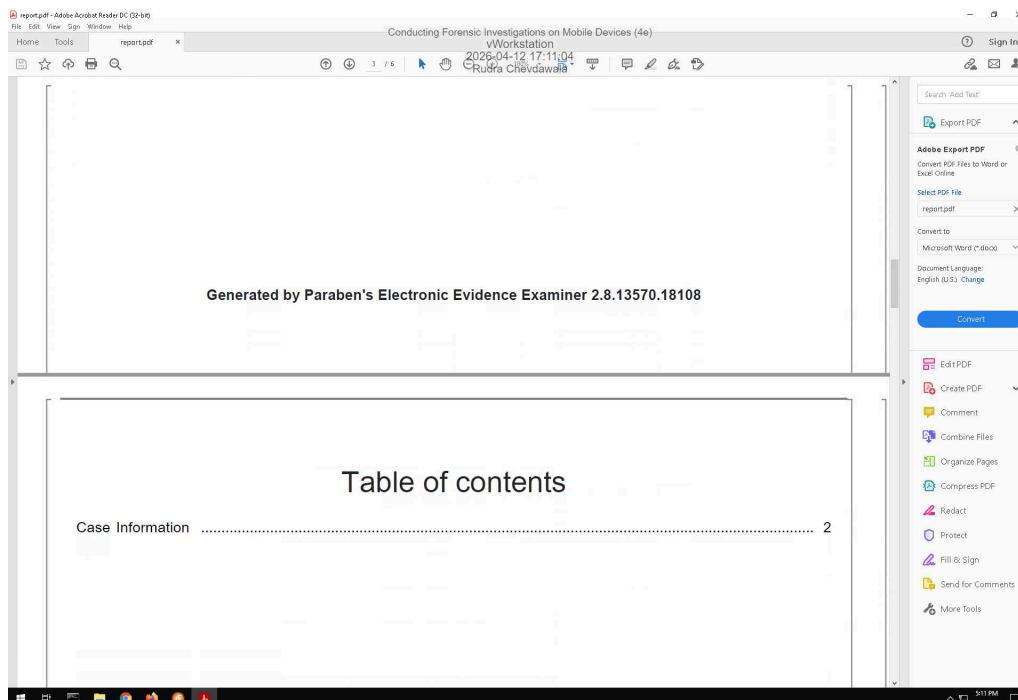

Conducting Forensic Investigations on Mobile Devices (4e)

Digital Forensics, Investigation, and Response, Fourth Edition - Lab 08

34. Make a screen capture showing at least two car pictures in the Thumbnail View.

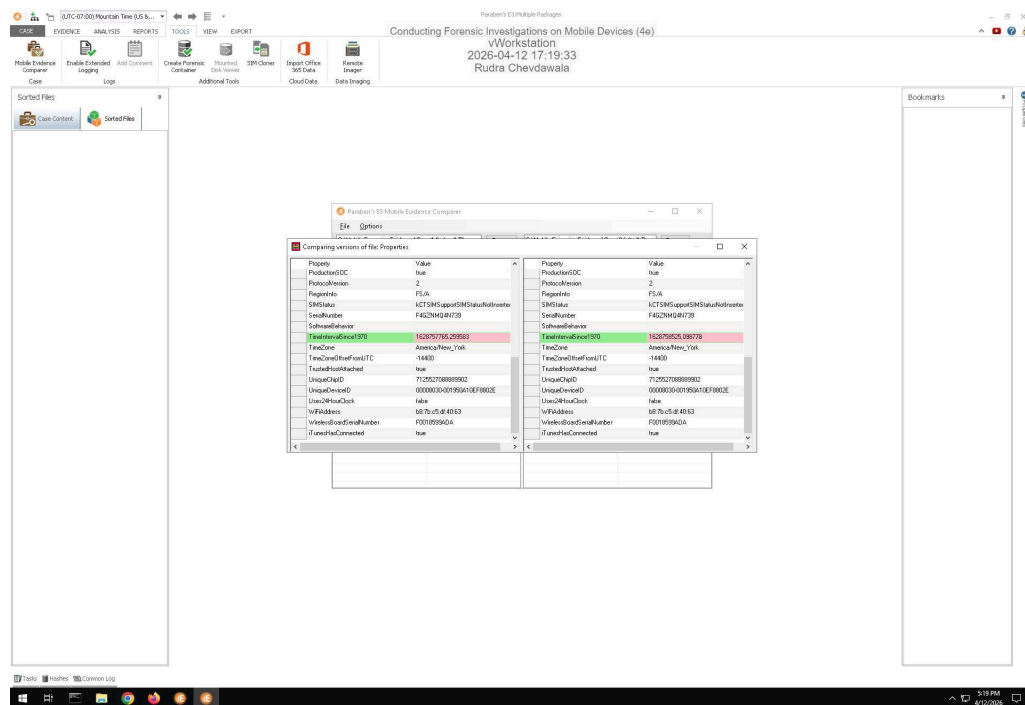

44. Make a screen capture showing the Table of contents in the investigative report.

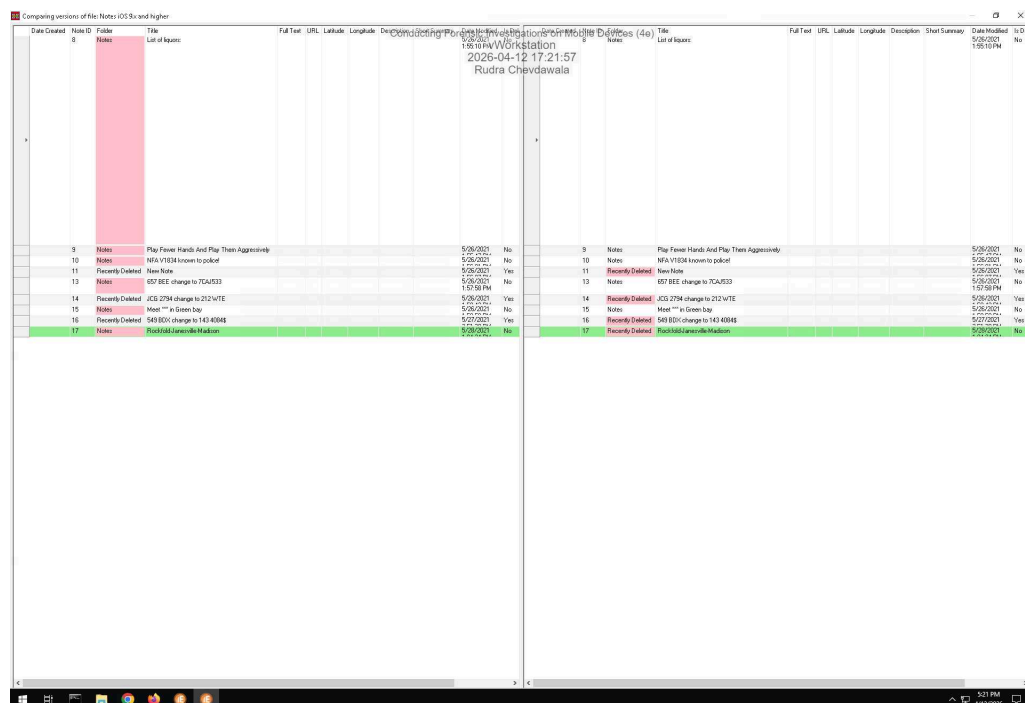

Part 2: Compare iOS Data Cases

Digital Forensics, Investigation, and Response, Fourth Edition - Lab 08

10. **Make a screen capture** showing the **difference in data case properties**.

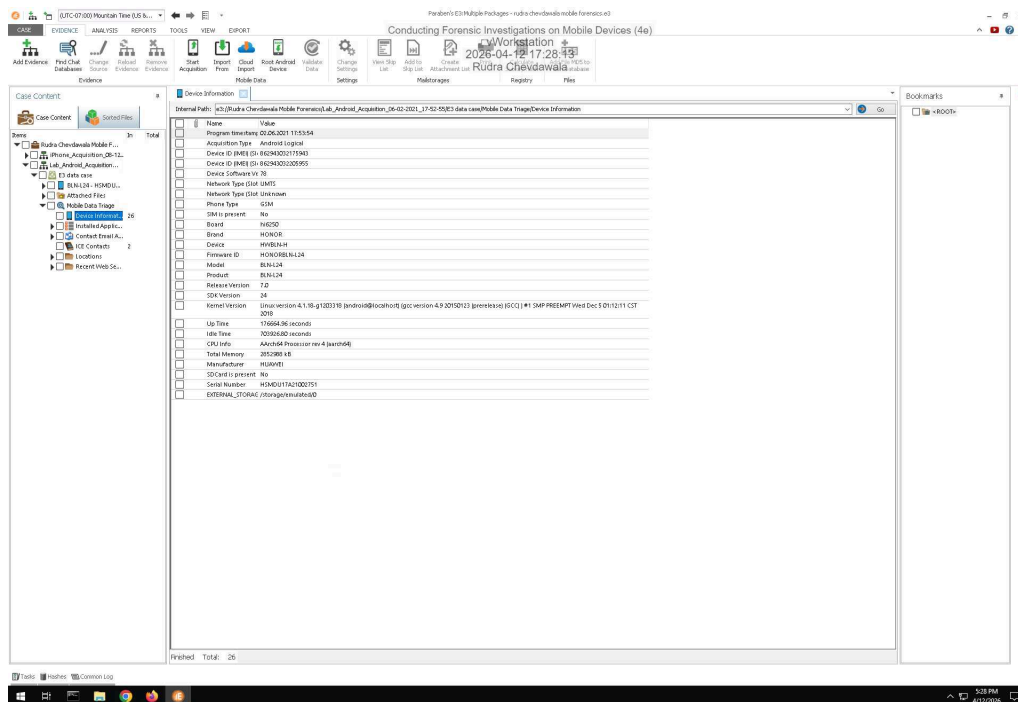

15. **Make a screen capture** showing the **additional note** in the newer data case.

Section 2: Applied Learning

Part 1: Identify Forensic Evidence in Android User Data

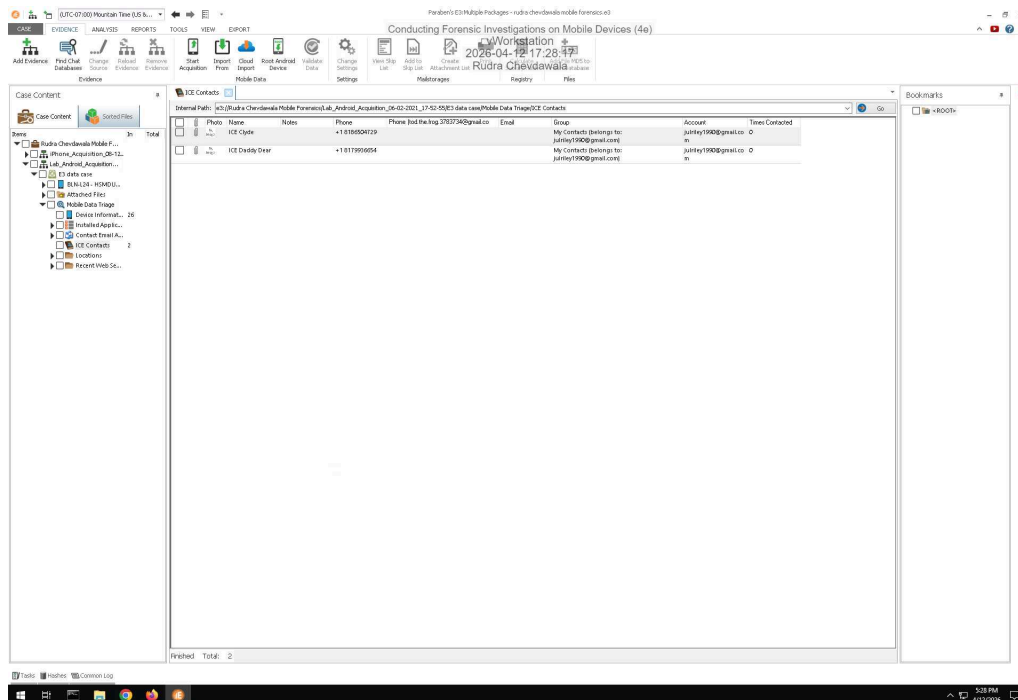

7. Make a screen capture showing the Device Information.

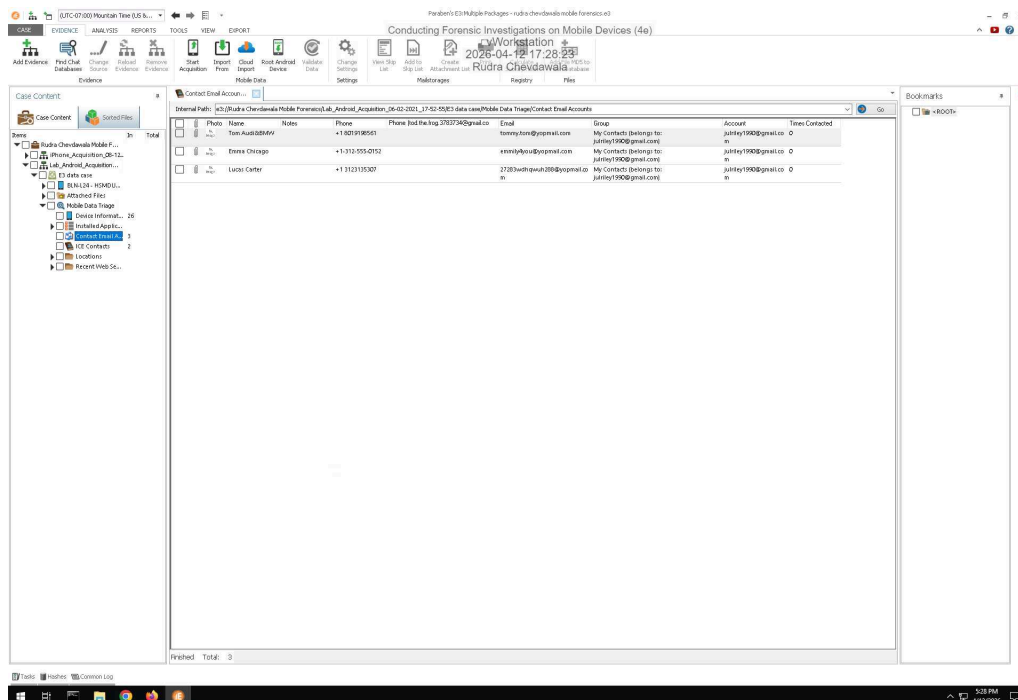

Conducting Forensic Investigations on Mobile Devices (4e)

Digital Forensics, Investigation, and Response, Fourth Edition - Lab 08

9. Make a screen capture showing the ICE Contacts.

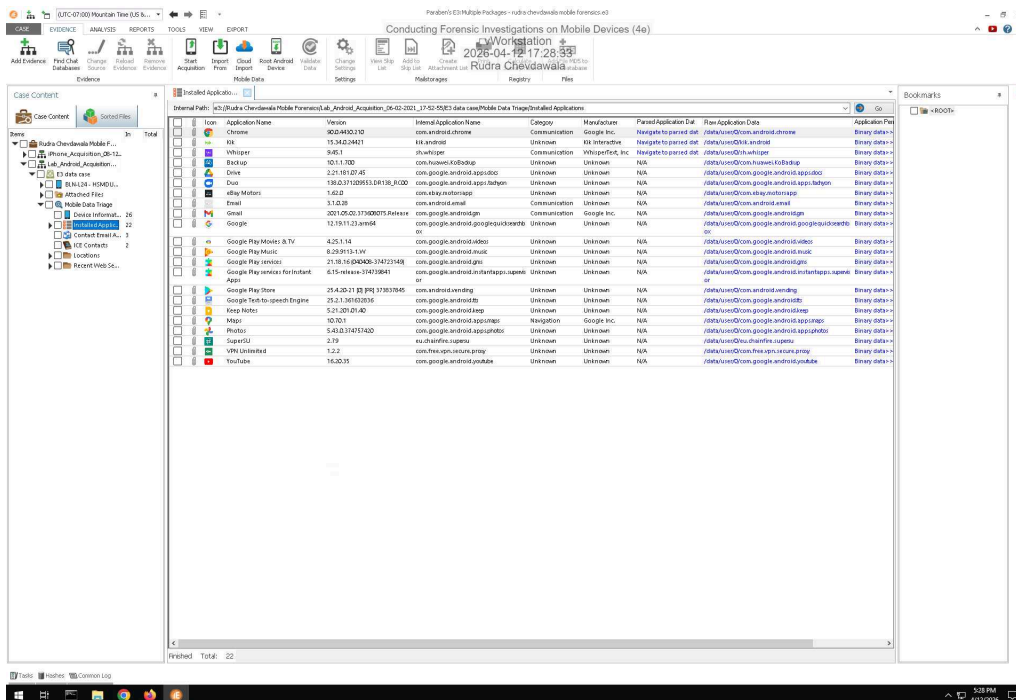

12. Make a screen capture showing the Contact Email Accounts.

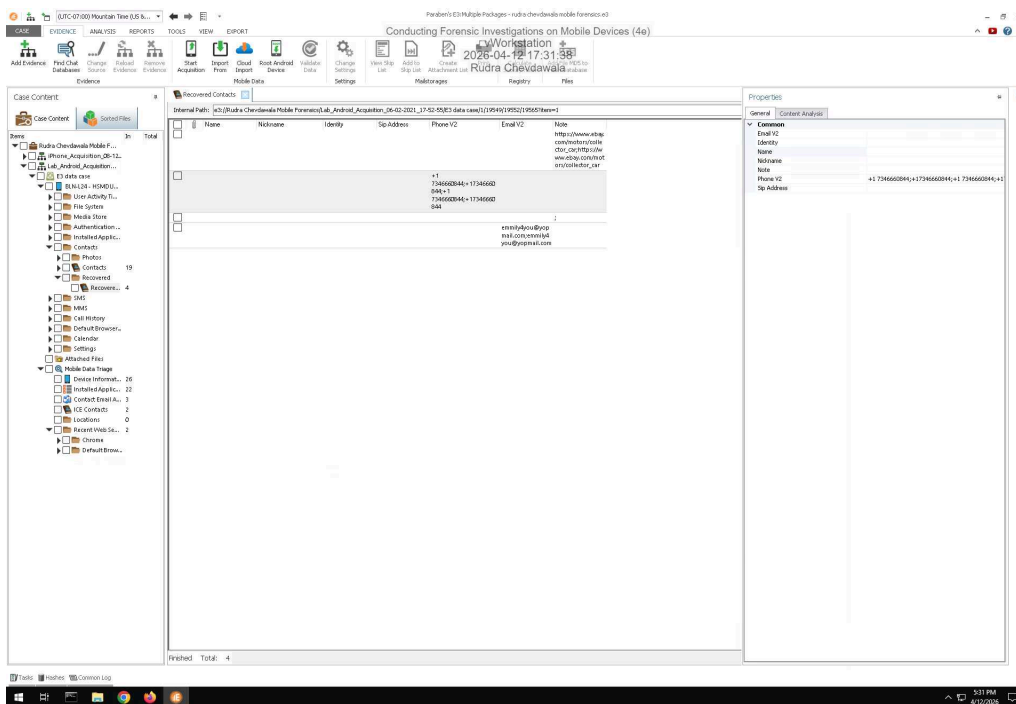

Conducting Forensic Investigations on Mobile Devices (4e)

Digital Forensics, Investigation, and Response, Fourth Edition - Lab 08

15. **Make a screen capture** showing the **Installed Applications**.

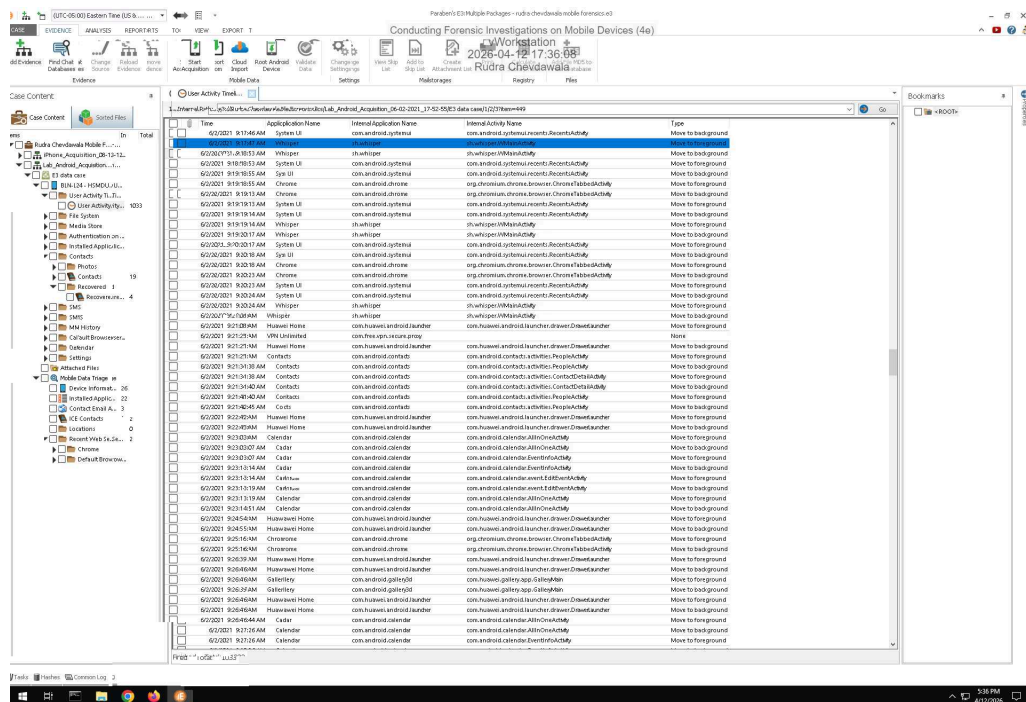

19. **Make a screen capture** showing the **recovered contact information** from the **Android phone**.

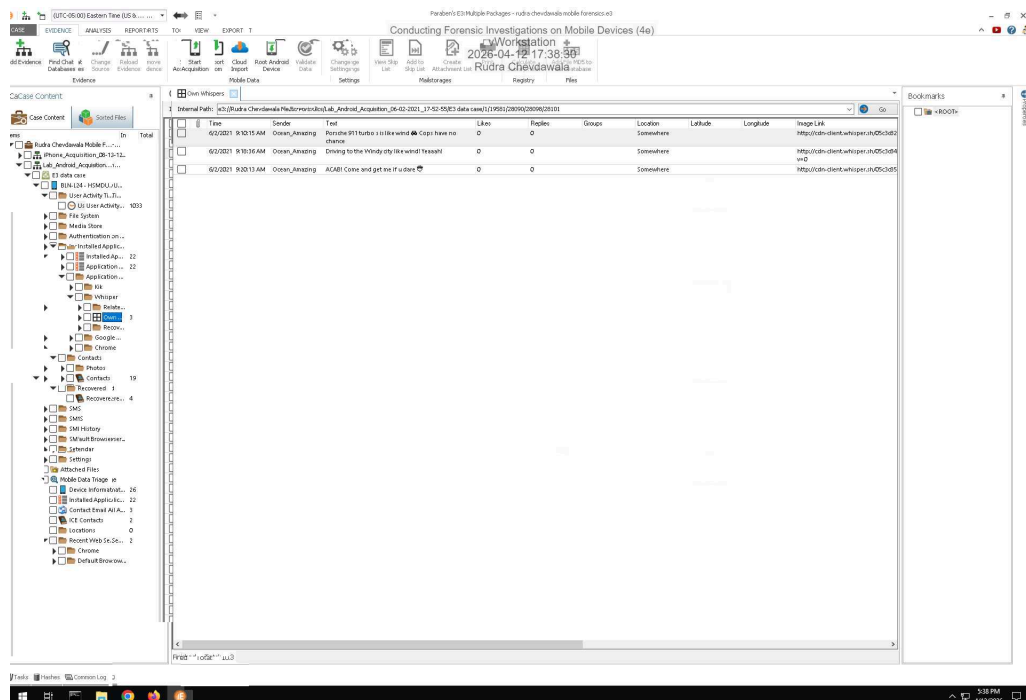

Part 2: Identify Forensic Evidence in Android Application Data

4. Make a screen capture showing the **User Activity Timeline** between 9:17:47 AM and 9:24:51 AM on 6/2/2021.

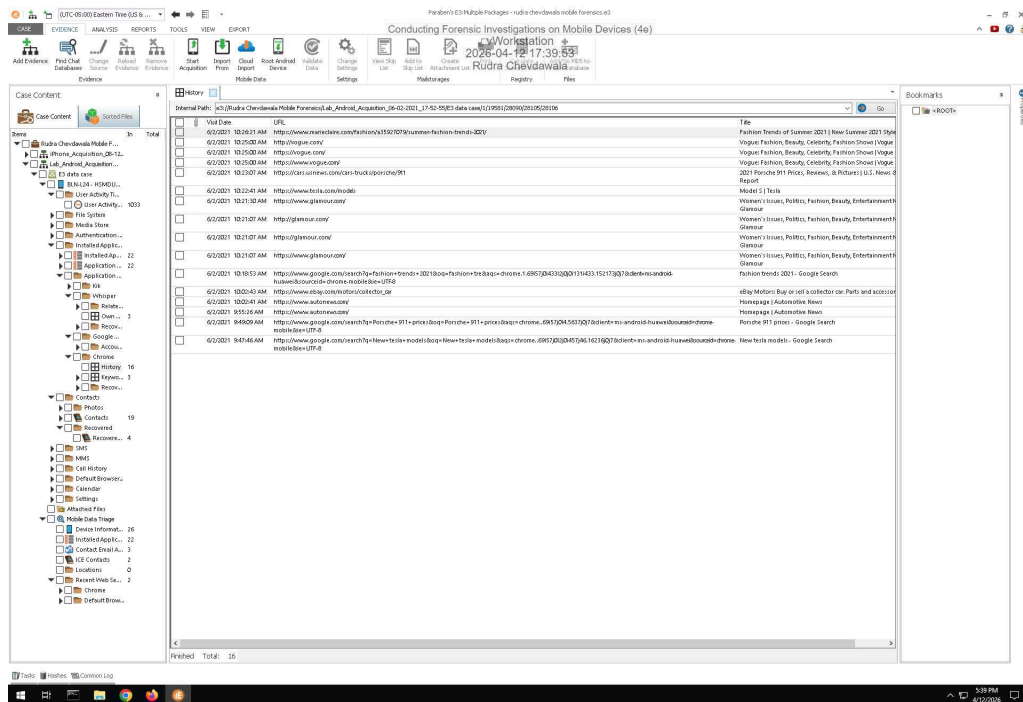

7. Make a screen capture showing the contents of the Own Whispers grid.

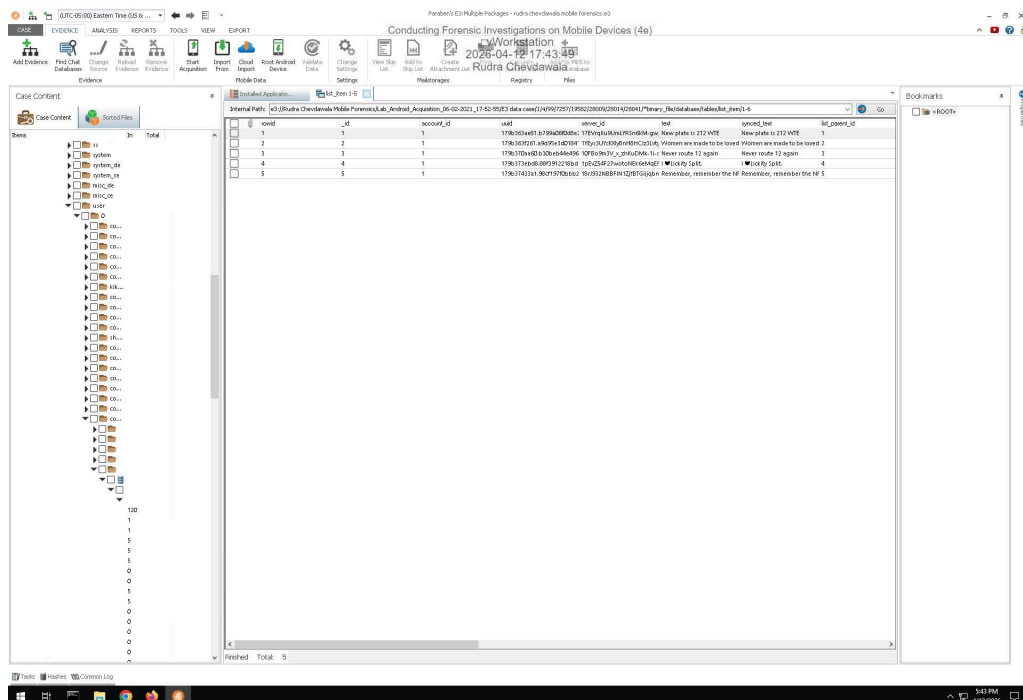

Digital Forensics, Investigation, and Response, Fourth Edition - Lab 08

10. **Make a screen capture** showing the **contents of the History grid**.

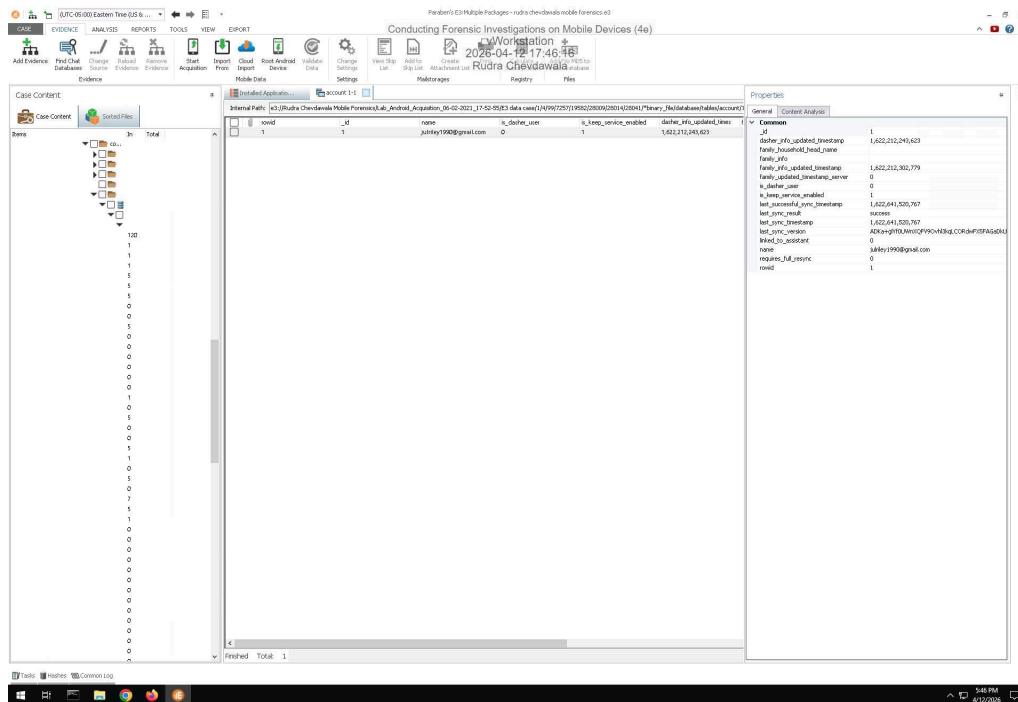

17. **Make a screen capture** showing the contents of the `list_item 1-5` table.

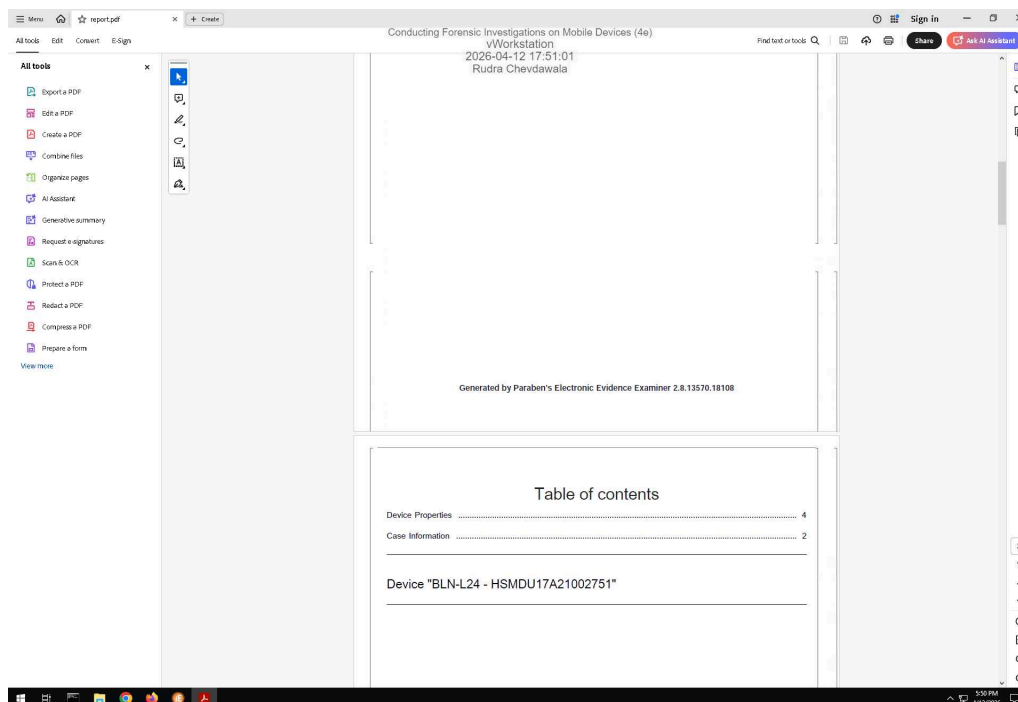

Digital Forensics, Investigation, and Response, Fourth Edition - Lab 08

20. **Make a screen capture** showing the **Keep Notes account owner**.

23. **Make a screen capture** showing the **Investigative Report's Table of Contents**.

Section 3: Challenge and Analysis

Part 1: Research Report Writing for Digital Forensics

Prepare a brief summary of the appropriate structure and best practices for preparing a digital forensics report.

A digital forensics report should be clearly organized and easy to understand, especially for readers who may not have a technical background. The report usually includes a case summary, details of how the evidence was collected, the analysis findings, and a conclusion. It is important to explain why the investigation was conducted and how the examiner became involved in the case. All steps taken during the examination should be carefully documented to protect the integrity of the evidence and keep a proper chain of custody. The findings should be presented in a factual manner, using simple language and supporting evidence such as screenshots or logs. A good forensic report tells the story of what the digital evidence shows and helps others understand the case, even if they review the report later.

Part 2: Draft a Forensic Report

Case Summary

A digital forensic examination was conducted on image files from an iPhone and an Android device associated with the names Bonnie and Clyde. The Madison Police Department requested a full forensic analysis as part of an investigation into an organized car theft operation. The purpose of the examination was to identify digital evidence related to vehicle theft activities and support potential criminal charges. The analyzed images included multiple forensic acquisitions from both devices.

Findings and Analysis

The forensic analysis was performed using licensed tools, including EnCase and Adobe Acrobat Reader. The iPhone, identified as an iPhone Series 12 running iOS version 14.4, was linked to Clyde and contained 11 photographs of vehicles along with visible license plate numbers, indicating potential involvement in car theft. The Android (Huawei) device, associated with Bonnie, contained notes listing stolen vehicles and license plate changes. Additional findings on the Android device included the use of suspicious applications such as Whisper and VPN Unlimited, suggesting attempts to conceal online activities. User activity timelines further supported suspicious behavior during key timeframes.

Conclusion

The forensic examination of the iPhone and Android devices revealed significant evidence linking Bonnie and Clyde to an organized car theft operation. Artifacts recovered from both devices, including vehicle images, notes, and application usage, support these findings. The presence of anonymizing tools and suspicious communication apps further strengthens the case. Based on the evidence identified, this analysis provides strong support for continuing the investigation and pursuing criminal charges.
